

IN THE CLAIMS

Claim 1. (canceled)

Claim 2. (currently amended) A contents server which generates guide contents for a tour from site information, information from a plurality of information sources and contents information, said contents server comprising:

information acquisition means for acquiring information specifying a combination of the information from the plurality of information sources and the contents information;

site information focusing means for narrowing down the site information using the acquired information;

guide contents generating means for generating the guide contents using the narrowed down site information; ~~and~~

guide contents output means for outputting the generated guide contents on a plurality of image layers superimposed on each other, each image layer corresponding to an information source among the plurality of information sources; and

preview customizing means for a user to preview and customize the guide contents on the basis of user information entered by the user; whereby the user can preview and customize said tour.

Claim 3. (original) The contents server according to claim 2, wherein:

the site information includes site positional information, and

said guide contents generating means generates the guide contents using map data, the map data including positional information on a map for each site, said guide contents generating means laying out and displaying the site information on the map by matching the site positional information to the positional information on the map.

Claims 4-7 (canceled)

Claim 8. (currently amended) An information processing method for generating guide contents for a tour from site information, information from a plurality of information sources and contents information, said information processing method comprising:

acquiring information specifying a combination of the information from the plurality of information sources and the contents information;

narrowing down the site information using the acquired information;

generating guide contents using the narrowed down site information; and

outputting the generated guide contents on a plurality of image layers superimposed on each other, each image layer corresponding to an information source among the plurality of information sources; and

previewing and customizing the guide contents on the basis of user information entered by a user, whereby the user can preview and customize said tour.

Claim 9. (original) The information processing method according to claim 8, wherein:

the site information includes site positional information, and

the guide contents generating step generates the guide contents using map data, the map data including positional information on a map for each site, the guide contents generating step including laying out and displaying the site information on the map by matching the site positional information to the positional information on the map.

Claim 10. (canceled)

Claim 11. (currently amended) An information processing method for using contents information, information from a plurality of information sources, and site information including positional information specifying a position of a site

to generate guide contents for a tour, said information
processing method comprising:

acquiring information specifying a combination of the
information from the plurality of information sources and the
contents information;

narrowing down the site information using the acquired
information;

matching the positional information included with the site
information to positional information on a map for each site to
produce a map/site match for each site, thereby generating the
guide contents; and

displaying the site information and the acquired
information on the map using the narrowed down site information
and the map/site match for each site, the site information being
displayed on a first image layer and the acquired information
being displayed on a second image layer superimposed with the
first image layer; and

previewing and customizing the guide contents on the basis
of user information entered by a user, whereby the user can
preview and customize said tour.

Claim 12. (original) The information processing method
according to claim 11, wherein the displaying step displays the
site information on the map using an icon corresponding to the
site information.

Claim 13. (original) The information processing method according to claim 12, wherein the displaying step displays the site information corresponding to the icon.

Claims 14-25 (canceled)

Claim 26. (previously presented) The contents server according to claim 2, wherein the generated guide contents are outputted based on an update date of the guide contents.

Claim 27. (previously presented) The information processing method according to claim 8, wherein the generated guide contents are outputted based on an update date of the guide contents.

Claim 28. (previously presented) The information processing method according to claim 11, wherein the site information is outputted based on an update date of the guide contents.
